Go to File->Open->Supporting Files and select keygen. Activate the keygen and save the file. Posts Tagged 'Bash' Users' questions about which command to use to accomplish a certain task are nearly always the same. A first search usually yields no good results. This is because most questions are asked by someone who has no idea how to use the system. Even if you're a "power user" and have used a Linux system for some time, you may still need to rely on Google in order to find the answer. Here are some examples: * How do I list all directories on a drive? I can't remember the command I used, but the answer is so obvious that a search in a command line book will do. Or you can ask your favorite search engine. * How do I clean a directory (delete files older than X days)? Again, a simple Google search will get you the answer. This will probably end up being a script that you put in your.bash_profile. * How do I find out the fastest way to transfer a large amount of files from one drive to another? Another common question. If you're at a command line and feel like killing time, just type find. -size +100M -print | xargs rsync to find files over 100 MB. You can find the first-ever write about the size of a Unix file, and how to find such files, by typing: find /dev -type f -size +100M -print | xargs du If you're really slow, you might want to "speed up" the find command and do this: find /dev -type f -size +100M -print | xargs du -a -i Now your du command will find files that are smaller than 100 MB. These are just a few examples, but there are countless other questions that one can ask in order to find the answer to the question you really want to know. Anyhow, enough ranting. Let me suggest some useful sites to find quick answers:Q: java-2d game graphics producing transparent rectangles I have been working on a 2d game for some time now, and everything has been going along smoothly until I had to add some

What's New In AutoCAD?

Ribbon Editing: We've added a new way to add and edit components on a ribbon by using the actions on the ribbon toolbar. (video: 1:23 min.) Improved Overlays: Overlays can now be independent of other drawings or on a different worksheet. You can create an overlay and then use it on a drawing, drawing set, or your personal drawing set. (video: 1:34 min.) Pinboards for PDM: Pinboards allow you to focus on one item at a time, not 10 or 100. CADWorx provides pinboards for any drawing file format. (video: 1:44 min.)
